# AIPs and documentation management: curating quantitative data

South-Eastern European Data Services

Irena Vipavc Brvar

ADP

SEEDS Workshop II

Ljubljana, 9.-11. February 2016

# SEEDS Workshop II 9.-11.2. 2016

# DATA FROM MY RESEARCH WILL BE SHARED

Data should be **user-friendly**, **shareable** and **with long-lasting usability**.

-> ensure they can be understood and interpreted by any user

This requires clear data description, annotation, contextual information and documentation.

## CAN YOU UNDERSTAND/USE THESE DATA?

# What should be captured?

Any useful documentation such as:

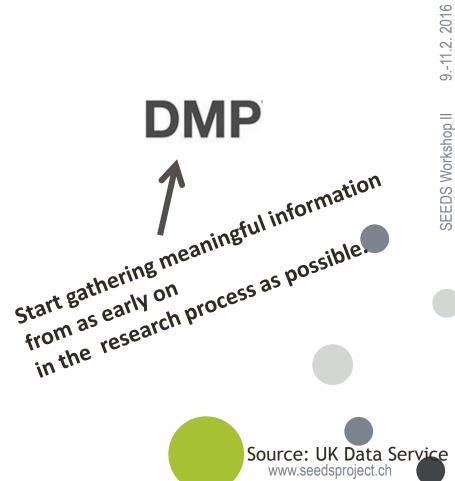

• final report, published reports, user guide, working paper, publications, lab books

Information on dataset structure

- inventory of data files
- relationships between those files
- records, cases...

Variable-level documentation

- labels, codes, classifications
- missing values
- derivations and aggregations

# Data - level documentation

Certain types of data file may contain important information which should be preserved:

 variable/value labels; document metadata; table relationships and queries in relational databases; GIS data layers/tables

Some examples:

• SPSS: variable attributes documented in Variable View (label, code, data type, missing values)

- MS Access: relationships between tables
- ArcGIS: shapefiles (layers) and tables in geodatabase; metadata created in ArcCatalog
- MS Excel: document properties, worksheet labels (where multiple)

Source: UK Data Service

# Data - level documentation: variable names

All structured, tabular data should have cases/records and variables adequately documented with names, labels and descriptions.

Variable names might include:

• question number system related to questions in a survey/questionnaire e.g. Q1a, Q1b, Q2, Q3a

- numerical order system
- e.g. V1, V2, V3

 meaningful abbreviations or combinations of abbreviations referring to meaning of the variable

e.g. oz%=percentage ozone, GOR=Government Office Region, moocc=mother occupation, faocc=father occupation

 for interoperability across platforms - variable names should be max 8 characters and without spaces

# Data - level documentation: variable labels

Similar principles for variable labels:

- be brief, max. 80 characters
- include unit of measurement where applicable
- 9.-11.2.2016 reference the question number of a survey or questionnaire e.g. variable 'q11hexw' with label 'Q11: hours spent taking physical exercise in a typical  $\frac{1}{2}$ week' - the label gives the unit of measurement and a reference to the question number (Q11b) (Q11b) Codes of, and reasons for, missing data avoid blanks, system - missing or Q
- Codes of, and reasons for, missing data avoid blanks, system missing or 'Q' values

e.g. '99=not recorded', '98=not provided (no answer)', '97=not applicable', '96=not known', '95=error'

• Coding or classification schemes used, with a bibliographic ref e.q. Standard Occupational Classification 2000 - a list of codes to classify respondents' jobs; ISO 3166 alpha-2 country codes - an international standard of 2 - letter country codes Source: UK Data Service www.seedsproiect.ch

# 7 EU VET - Study on vocational education in seven European countries

The 7EU - VET project – Detailed Methodological Approach to Understanding the VET Education - is <u>a research study on vocational</u> <u>education and training</u> which builds on theoretical backgrounds and <u>secondary analyses</u> of the existing documentation as well as on national and EU data in order to conduct <u>quantitative and qualitative studies</u> and derive empirical results. The project is built upon one of the goals of the Lisbon strategy, which is the promotion and the quality of vocational education and training.

# Manuals

- EUVET 12
  - <u>Coding of Master questionnaire</u>
- EUVET 12 (Manual for cleaning and entering data)
  - general instructions
  - defining missing variables
  - issues with specific question
  - entering data
  - quality control
  - cleaning the data
  - checking for errors.

search

#### The 3rd International ESS Conference • 13-15th July 2016 • Lausanne, Switzerland MORE >>

#### Methodological Research

The European Social Survey runs a programme of research to support and enhance the methodology that underpins the high standards it pursues in every aspect of survey design, data collection and archiving.

#### **Data and Documentation**

Data and documentation can be accessed by round (year), by theme or by country. Data are available for download and online analysis.

#### **ESS Resources**

The ESS provides a series of outreach resources designed to increase the use of its data, including ESS Bibliography, Findings, Training Courses and eLearning resources.

#### ESS6 - integrated file Edition 2.1

#### Integrated files and documents

ESS6 - integrated file, edition 2.1

ESS6 - data from Interviewer's questionnaire, edition 2.1

ESS6 - test variables from Supplementary questionnaire, edition 1.0

ESS6 - parents' occupation edition 2.1, all country files and integrated isco file

ESS6 - data from Contact forms, edition 2.0

ESS6 - interview time data, edition 1.1

ESS6 - data from Media claims, edition 4.0

Guide to weighting of ESS data

Useful hints: Combining data files, Renaming variables, Other data formats.

# **Colectica for Excel**

#### Document Variables and Datasets

Colectica allows documenting of Variables, Code Lists, and Data Sets directly from within Microsoft Excel.

#### Import Stata to Excel

Colectica for Excel Professional allows direct importing and documenting of Stata data files, with a file extension .dta. The variable names, labels and code lists in the Stata file will also be imported and added to the stored documentation automatically.

### Metadata is Embedded

Colectica saves your standards-based metadata directly in the Microsoft Excel file. If you email or share your file, the metadata will still be attached.

## Import SPSS to Excel

Colectica for Excel Professional allows direct importing and documenting of SPSS data files, with a file extension .sav. The variable names, labels and code lists in the SPSS file will also be imported and added to the stored documentation automatically.

### Publish Documentation

Colectica for Excel can generate documentation for your Variables, Code Lists, and dataset in PDF, Word, HTML, and XSL-FO.

#### Create DDI-Lifecycle Metadata

Export your data documentation to an XML file in the DDI metadata format, the standard for data documentation. Open and edit it from Colectica Designer, Colectica Express, or other DDI applications.

# **Nesstar Publisher**

**Nesstar Publisher** – a sophisticated authoring environment that can publish data from a variety of sources (including SPSS, SAS, Excel etc.). The tool includes a specialised metadata editor, data and metadata validation routines and metadata templates that provide standardisation and control.

Easy editing/creation and export of DDI documented datasets with XML experience needed.	Tools to compute/recode/label new, or existing, variables to be added to a dataset before publishing.
Tools to validate metadata and variables.	The ability to import and export data to the most common statistical formats, including delimited files.
The ability to include automatically generated frequency and summary statistics for each variable.	Multilingual - Arabic, Chinese, English, French, Portuguese, Russian and Spanish and more.

SEEDS Workshop II

- Nesstar (.Nesstar)
- NSDstat (.NSDstat)
- DDI Document (\*.xml)
- SPSS (\*.sav)
- SPSS Portable (\*.por)
- SPSS Syntax (\*.sps)
- STATA (\*.dta)
- Statistica (\*.sta)
- NSDstat (\*.nsf),
- dBase (\*.dbf)
- DIF (\*.dif)
- Delimited Text (\*.txt, \*.csv, \*.sdv, \*.cdv, \*.prn)
- PC-Axis (\*.px)
- Excel (\*.xls)
- Hierarchy Definition File (\*.NSDstatHDef)

File size limitations: The maximum size of file that can be imported is approximately 10 Gigabytes, with a limitation within a file to 260 million cases. However, using files of this size will affect response times.

# Cleaning a data file

One think is to correct label a data file, yet another think is to check the data.

See if data file needs to be anonymized. Level of anonimization is defined by user conditions of a file it self.

You might decide to prepare files for different communities:

- ScUF Secure Use File
- SUF Scientific Use File
- PUF Public Use File
- CUF Campus Files (usually specific file prepared for training)

# Basic anonymisation of archives distributed microdata

#### • <u>deleting variables</u>

Direct identifiers (telephone numbers, addresses etc.) are removed.

#### recoding indirect identifiers

But still allowing serious researchers to receive datasets with indirect identifiers non-recoded). Recoding includes removing values and bracketing – combining the categories of a variable (aggregation).

Anonymisation of Eurostat files (the case of Eurostat Labor Force Survey)

- <u>deleting variables</u>: indirect identifiers and unneeded variables are removed (municipality, wave nr. etc.)
- <u>bracketing</u>: age, marital status, education, years of residence, age of establishment of residence, duration of search of employment, professional status, country & nationality
- <u>classification</u>: income numbers are not given, respondents are divided into classes based on their income
- <u>aggregation</u>: economic activity and occupation values are aggregated at 1-digit level
- <u>top-coding</u>: restricting the upper range of a variable (no. of hours worked)
